CS162 Spring 2019 - Final project

The final project has come and gone! I feel I had great control over what I wanted to do and how to implement my ideas with this project. I credit that to the knowledge I've gained over the course of this quarter. There was rarely a moment where I had to stop and think hard about how to implement something. There were even times where I did something silly and realized, "oh all I need to do is send this function a stack of space pointers" to do what I want to do. That was absolutely not something I was comfortable with at the beginning of this class.

All in all, I think I've learned such a great deal, and I am thankful that we are still the c++ cohort.

Thanks for being my TA and thanks for all of the feedback you've given thus far. I don't know if you're taking the summer off, but if you are - have a great summer,

Chris Nelson
